OBJECTIVE

AI Engineer with hands-on experience designing and deploying autonomous agents and multi-agent orchestration systems using Python, LangGraph, RAG , and modern backend stacks like FastAPI. Experience in translating technical problems into working software, integrating AI services, and delivering measurable improvements through end-to-end development.

EDUCATION

Bachelor of Engineering in Computer Science – BMS Institute of Technology (CGPA: 8.6) 2025

Academics – Clarence High School (Class X: 92.8%, Class XII: 94%) 2019 - 2021

EXPERIENCE

AI Backend Developer Intern Oct 2025 - Feb 2026

Zetacoding Innovative Solutions *Bengaluru, IN*

- **Built and deployed a stateful, multi-tool AI knowledge agent** in LangGraph for natural-language queries over complex technical documentation.
- **Designed and configured MCP servers** connecting local tools and custom data repositories to LLMs, working with the engineering team to prioritize integrations and expand agent capabilities.
- **Restructured context-injection paths** between unstructured data and LLM prompt windows, improving relevant precision and reducing irrelevant context and hallucinated tool outputs.

PROJECTS

LearnMate AI- Adaptive Learning Companion| LangGraph, Gemini, ChromaDB, Next.js

- **Designed and built an agentic tutoring workflow** using LangGraph and Google Gemini, translating student performance signals into step-by-step guidance and difficulty adaptation across 19 curriculum nodes and 3 tiers with backend in FastAPI.
- **Engineered persistent student memory** and a retrieval + grounding pipeline (chunking, embedding, semantic search via ChromaDB) to personalize LLM responses to student-specific history, reducing hallucinated or generic tutoring output by 35%.
- **Shipped an interactive learning analytics application** using Next.js, TypeScript, React Flow, and a Markdown/LaTeX-enabled chat interface to visualize mastery and support real-time interaction.

Advanced Detection of SQL Injection and XSS Attacks

- **Designed and developed an end-to-end real-time threat detection solution** for SQL injection and XSS attacks, training a custom Conv1D CNN using TensorFlow/Keras and achieving **94% classification accuracy** on a labeled dataset.
- **Deployed the trained model as a Flask API** for real-time inference on live HTTP traffic, integrating the ML model into an application-level detection pipeline.

LedgerLens| Gemini Multimodal Vision API, Pydantic v2, `pdfplumber`, Pillow (PIL)

- **Architected an Autonomous Multimodal Document Pipeline** with asynchronous ingestion engine using pdfplumber, and Google Gemini Multimodal Vision that converted a huge vector-flattened bank statement containing zero extractable text into structured tabular financial records and designed a balanced algorithm that sequentially evaluates accounting consistency with zero hallucination.
- **Optimized High-Throughput Concurrent Processing** with an asyncio worker pool with semaphore-controlled concurrency and exponential backoff retry handling for HTTP 429/503 errors, processing pages independently in memory to eliminate I/O overhead and avoid LLM output token exhaustion. .

SKILLS

AI & LLM Engineering: LLMs, Generative AI, OpenAI API, Google Gemini API, RAG, Prompt Engineering, LangChain, LangGraph, MCP, Multi-Agent Systems, Vector Databases, Embedding Models, Async Programming, Agent Evaluation & Testing
Software Engineering: Async Python, SQL, FastAPI, Flask, REST APIs, Azure Cloud Services, Node.js, JavaScript, React, Next.js, Unit Testing, Git/GitHub
Data & Infrastructure: ChromaDB, Vector Databases, SQLite, Firebase, Docker

CERTIFICATIONS AND COURSES

- **AI Engineering Agentic Track: The Complete Agent & MCP Course** -Ed Donner
- **AI Engineering Core Track: LLM Engineering** -Ed Donner
